Auto cycle

Printing units

we're on it.

Auto cycle

Printing units

Your **benefits** at a glance:

- a complete motion sequence of the selected screen printing unit can be simulated via an approval button
- the switch plate stands still for this function so that a once entered article remains in the situation
- set-up times shorten considerably
- the function of the auto cycle is used in setup mode to set up a function module (e. g. screen printing unit, print image inspection)
- if the setup mode is active and the button auto cycle actuated, a complete motion sequence of the selected function module can be simulated via the consent switch
- the switch plate stops at this function so that a once entered article remains in the station

Characteristics

- the software update can be done via remote maintenance access with help of a stable internet connection
- software expansion (HMI and machine software)
