

KOENIG & BAUER

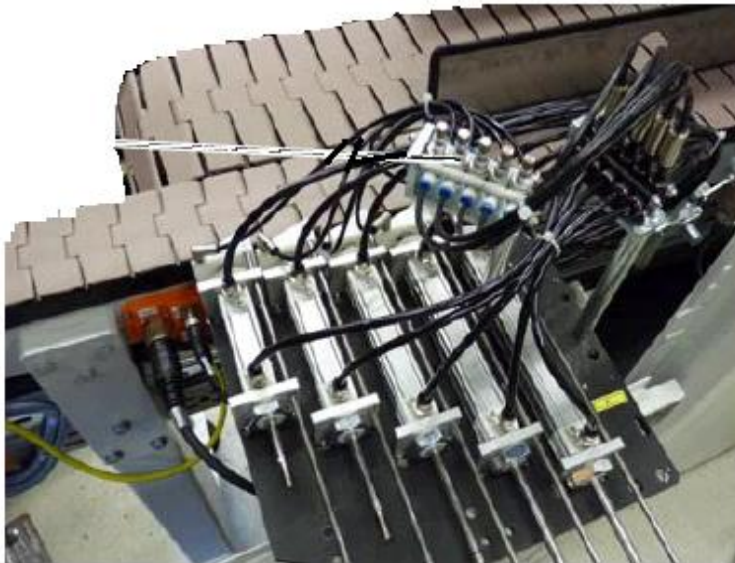

Automatic article ejection

we're on it.

Automatic article ejection

Your **benefits** at a glance:

- increasing of productivity by faster set-up to different articles / article diameters
- precisely controlled transfer
- reduction of set-up time due to faster adjusting of the cylinders

- staggered air cylinders build a ramp to divert the reject items from the outfeed conveyor to an adjacent removal conveyor
- each cylinder can be adjusted individually by changing cam values, this allows a more easy adaption to different articles
- due to the possibility of controlling each cylinder specifically the mechanical set-up is substantially simplified
- the required amount of air can be adjusted precisely even in advance
- the software upgrade can be installed by using remote maintenance and a good internet connection
- service charges for a technician on the spot do not apply

Characteristics

- software expansion
