Automatic supply

for UV ink

we're on it.

Automatic supply

for UV ink

Your **benefits** at a glance:

- increasing of productivity due to reduced downtimes
- machine stops for refilling are no longer necessary as the ink can be replenished outside the machine
- reduction in ink consumption due to needs-based ink supply and optimum color quantity in the sieve at all times

- the ink feed can simply be made using the existing sales packaging ink container from the paint manufacturer
- the ink container is attached to a motor-driven turntable
- the stirring rod mixes the colors continuously
- a sturdy designed hose pump conveys the UV ink to the screen printing process in randomly adjustable intervals

Characteristics

- in addition to software expansion, mechanical and electrical retrofits are required
- we recommend the retrofitting by one of our qualified service technicians
- this offers the advantage to directly train the machine operators in terms of functionality, configuration and operating principle
