Lubricant dispenser

with external power supply

we're on it.

Lubricant dispenser

with external power supply

Your **benefits** at a glance:

- simple, self-explanatory operation
- reliable and precise lubricant dispensing, regardless of temperature and back pressure
- Continuous control of the lubricant dispenser drive and its system connection
- A regular battery replacement and its associated costs are avoided

- conversion of the existing lubricant dispenser to an automatic, time/ pulse-controlled lubricant supply to the main drive pinion
- main drive pinion and ring gear of the turntable are supplied independently of temperature and reliably with the appropriate amount of grease
- a LCD display with adjustment button allows a quick and easy control of the settings directly on the dispenser
- the operating condition of the electromechanically driven lubricant dispenser is continuously monitored
- due to a connection to the fault reporting system of the printing machine, operating status messages are also displayed on the machine control panel

Characteristics

- replacement of the grease cartridge with retrofitting of electronic components
- software expansion
- we recommend the retrofitting by one of our qualified service-technicians
