

KOENIG & BAUER

Speed profile development

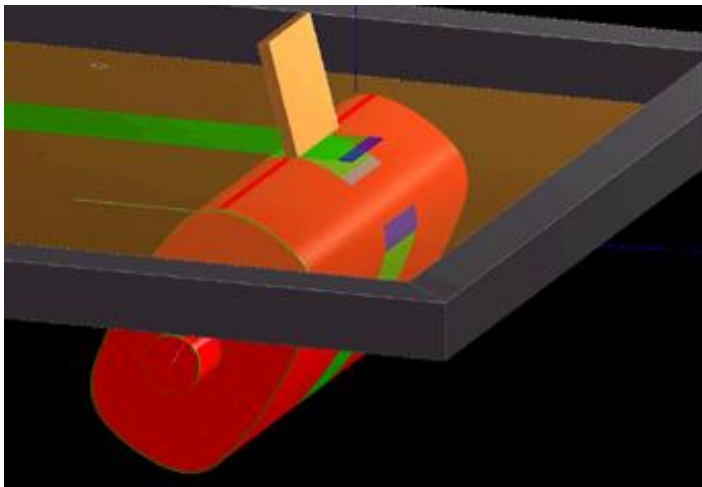

we're on it.

Speed profile development

Your **benefits** at a glance:

- with the program speed profile development, article specific speed curves can be developed
 - higher print quality
 - smoother movements
 - a higher printing performance can be achieved

- with the software module speed profile development, speed profiles can be created for each print
- complicated article geometries require lower speed in some parts of the article for optimum print results
- until now, the customer was only able to influence and optimize the course of the speed to a very limited extend
- the software module allows a print speed to be adjusted individually to the article contour

Characteristics

- software expansion (HMI and machine software)
- the software expansion can be done via remote maintenance access with a stable internet connection
