**Stepwise infeed conveyor**

we're on it.

# Stepwise infeed conveyor

## Your **benefits** at a glance:

- effective infeed of not jammable articles
- articles with a sensitive surface can be fed to the machine without damage
- effective avoidance of fallen articles by automatic switching of the belt speed

- the stepwise infeed conveyor allows manual feeding of non-jammable articles
- all articles are placed on the conveyor belt by hand at approximately equal intervals
- as soon as the first article has been transported to the article-specific infeed plate, the conveyor belt stops
- when the robot picks up the article from this position, the conveyor belt continues to move until the next article arrives at the pick up position in the infeed plate

## Characteristics

- in addition to software expansion, electrical retrofits are required
- retrofit of an article-specific infeed plate required
- we recommend the retrofiting by one of our qualified service technicians
- our technicians also take over the training with regard to functionality and setting of the stepwise infeed conveyor
