**Traveling positioning aid**

we're on it.

# Traveling positioning aid

## Your **benefits** at a glance:

- The articles set up by hand are aligned and transported to the acceptance position of the input robot
- even non-jammable articles are precisely aligned on the belt and optimally gripped by the input robot
- articles with a sensitive surface can be fed to the machine without damage
- the positioning aid simplifies the manual feed of non-jammable articles
- the positioning aid is used to position articles that have been set up by hand, centrally and at a uniform distance from each other on the conveyor belt
- the exact positioning of the article on the input belt allows the article to be gripped optimally by the entry robot

## Characteristics

- in addition to software expansion, mechanical and electrical retrofits are required
- the retrofitting will be done by one of our qualified service technicians
- our technicians also take over the training with regard to functionality and setting of the positioning aid
